A note for families

To send home with the blank Wide-Awake Experiment tracker.

Dear families,

This week our class read The Sleepover Chocolate Disaster, a story about a sleepover, a secret chocolate cake and a very long night — and a girl who learns to observe her own body like a scientist.

Your child may bring home a one-week Wide-Awake Experiment. It is optional and private: nothing is collected, checked or graded. It asks your child to notice when they have something that might contain caffeine, at what time, and when they finally fell asleep — and it treats a question mark as a real result.

If you'd like to help: ask, don't check. Praise the question mark. Don't say the finding first. And stop after one week.

The book never calls a food good or bad and includes no milligram charts or bedtime rules; we're keeping it that way. If you have questions about your child's sleep or health, please talk with your pediatrician.

Nothing here is medical advice. This book is about one ordinary night. Talk with your pediatrician before running the tracker if your child has trouble falling asleep, has ever had a racing-heart episode, or lives with a diagnosed condition — for a racing heart, skip the evening chocolate rather than time it. The American Academy of Pediatrics advises children skip energy drinks entirely; page 66 says so in a child's words.
