A note for families

To send home with the blank Salty-Snack Experiment tracker.

Dear families,

This week our class read The Bottomless Popcorn Paradox, a story about a girl who learns to hear her body's signals — and to check her own reasons — like a scientist.

Your child may bring home a one-week Salty-Snack Experiment. It is optional and private: nothing is collected, checked or graded. It asks your child to notice when they have something salty, how many times they drink water, and how their mouth and head feel — and it treats a blank day and a question mark as real results.

If you'd like to help: ask, don't check. Praise the blank day. If your child names a reason that sounds wrong, let it stand for a minute and ask one question. And stop after one week.

The book never calls a food good or bad and includes no sodium or calorie counts; we're keeping it that way. If you have questions about your child's health, please talk with your pediatrician.

Nothing here is medical advice. This book is about ordinary, passing sensations. Call your pediatrician if headaches come daily, wake your child from sleep, or keep getting worse; if thirst and bathroom trips rise sharply alongside unusual tiredness or weight loss; or if your child already lives with a diagnosed condition. Go now for a sudden severe headache with confusion, vomiting or a stiff neck.
